APPLICATION TIPS

is important that you follow these steps for easy application of CUBE MOSAIC. Our team can so provide you with technical support and information for the application of your tiles. We recommend that a qualified applicator be used for the application of CUBE MOSAIC.

Step 1. Preparing the surface

The surface to be tiled must be clean, smooth and clear of dust. It must be in plumb and should be dry.

Step 2. Applying the adhesive

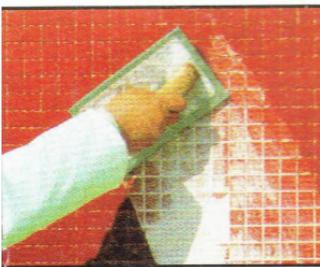

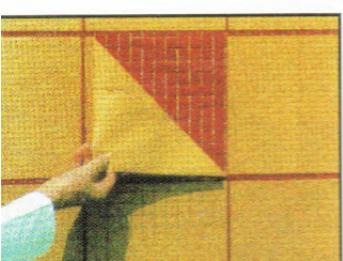

Apply a good quality latex-modified thinset approved for use with mosaic tiles. Be sure to use a thinset that is compatible with your substrate and environment. The adhesive should be thick enough to avoid the mosaic sheets from slipping once placed on the wall. Spread the adhesive uniformly (about 3mm thick) on the wall using the straight edge of the trowel. With the toothed edge of the trowel, comb the adhesive through.

Step 3. Applying CUBE MOSAICS

Apply CUBE MOSAIC sheets with the paper side facing up. Press the sheets firmly in one direction. Using a rubber float, tap the sheets. A wooden float may also be used but never a metal one. Check that all sheets are placed at the exact same distance from each other as the tiles.

After the mosaics have started to set, but before they become fully bonded the paper should be removed. Use a damp sponge on the surface of the sheets to ensure easy removal of the paper. Remove the paper carefully by pulling one corner of the paper diagonally across the sheet. This must be done gently to ensure that no tiles are dislodged in the process. Realign any tiles with a spatula and remove excess adhesive at this point. Let the adhesive dry for approximately 24 hours before beginning the grouting process.

SPECIFICATION

Step 4. Grouting

Use a sponge and warm water to remove any excess adhesive on the sheets. The surface must be free from dust. Using a hard rubber float, spread the grout horizontally and vertically on the mosaic sheets. Cover an area of not more than 2 Sq. mtr. at a time. Remove any excess grout float by working diagonally across the mosaics. After grouting, wait approximately 20 minutes before cleaning the excess grout.

Important

Allow tile work for exterior application or in areas subject to prolonged water immersion such as pools, fountains, spas, etc. to cure for 20 days before exposing to immersion.

Specifications

Composition	Product is made of glass raw materials.
Tile Size	20mm x 20mm x 4mm (approx)
Tile Weight	3 grams (approx)
Sheet Dimension	327mm x 327mm (1.15 Sq. Ft.)

All data are indicative for reference only.

Technical Details

Water Absorption	0.032% approx (almost nil)
Chemical Resistance	Resistant to general acids and alkalis .
Permanent Colour	Non fading and retains its elegance.
Washability	Washable with water, diluted hydrochloric acid, tile cleaning acids.
Conductivity	Since glass is a poor conductor of heat, it deflects heat.
Frost Resistance	Nil

A slight variation of glass mosaic colors are inherent features of high temperature process of glass forming. It is accepted globally as per rules laid down by American Tile Association.

Samples are for colour indication and slight shade/ tonal variation may occur.

Installation Guidance For Sutabumi Stone

PREPRATION

- 1 Make sure that you already water profing the pool and no leaking before installing the stone tiles.
- 2 Measure the pools length to know where is the best point to start, For the curve pool you can start instal from the corner.
- 3 Always install the pool tiles before installing the coping. Installing the coping before installing the pool tiles makes the installation process difficult and may need a lot of adjustment and repairing as a result.
- 4 Prepare the adhesive as per the instruction. Keraflex Maxi S1 is suggested

INSTALLATION

- 1 Nail a length of plywood as a base under where the tiles will sit as the first layer, ensuring it is level. Apply the adhesive and lay the tiles. The thickness of the adhesive approx 10~15 mm Push the tiles using the rubber mallot to get the best surface level. Use the tiles clips to get perfect spacing between tiles
- 2 Use a spirit level to check tiles are level and straight, make any adjustments with rubber mallot recheck with spirit level
- 3 Wait for the adhesive to dry as per the instruction at least 4 hours
- 4 Clean the surface of the stone with the sponge make sure there is no adhesive on the tile stone surface.

MORNING VIEW

5

Apply the grouting with the grout float carefully Any pool tile grout should work, but suggested to double check with distributor at time of purchase

6

Use the wet sponge to clean the grout off the surface of the tiles Only use one side of the wet sponge to clean small section and then use the other clean side to wipe next small section. Make sure you change the water in the bucket once it turns white

7

Apply the water based stone sealer.

8

Surfaces are ready to use after 24 hours (walking on etc), swimming pool can be filled water after 3 days

9

If there is no plan to fill the water after 3 days,Please the surface keep wet every 2 days especially under the dry situation by spraying the clean water on the stone surface to avoid oxidation. Also do not let the stone exposed under hot sun shine, always use canvas to protect the installed stone

INSTALLATION GUIDANCE FOR GREEN SUKABUMI STONE

TOOLS

1	Spirit level	
2	Soft Rubber Hammer	
3	Trowel	
4	Measurement Type	
5	Concrete Nails 2"	
6	Iron Hammer	

TOOLS

7	Adhesive Mixer	
8	Grinder	
9	Grinding Wheel	
10	Flexible Pad 100	
11	Grinding Cutting Wheel	
12	Bucket	
13	Sponge	

TOOLS

14	Paint Brush 2.5 "	
15	Tiles Clips	
16	20 mm Plywood	 Cut into 50 mm x Length

MATERIAL

1	Stone Adhesive	
2	Grouting Nat	
3	Green Sukabumi Tiles 100x100	

INSTALLATION GUIDANCE FOR GREEN SUKABUMI STONE

PREPRATION

1	Make sure that you already water profing the pool and no leaking before installing the stone tiles.	
2	Measure the pools length to know where is the best point to start, For the curve pool you can start instal from the corner.	
3	Always install the pool tiles before installing the coping. Installing the coping before installing the pool tiles makes the installation process difficult and may need a lot of adjustment and repairing as a result.	
4	Prepare the adhesive as per the instruction. Keraflex Maxi S1 is suggested	

INSTALLATION

1	Nail a length of plywood as a base under where the tiles will sit as the first layer, ensuring it is level. Apply the adhesive and lay the tiles. The thickness of the adhesive approx 10~15 mm Push the tiles using the rubber mallot to get the best surface level. Use the tiles clips to get perfect spacing between tiles	
2	Use a spirit level to check tiles are level and straight, make any adjustments with rubber mallot recheck with spirit level	
3	Wait for the adhesive to dry as per the instruction at least 4 hours	
4	Clean the surface of the stone with the sponge make sure there is no adhesive on the tile stone surface.	
5	Apply the grouting with the grout float carefully Any pool tile grout should work, but suggested to double check with distributor at time of purchase	
6	Use the wet sponge to clean the grout off the surface of the tiles Only use one side of the wet sponge to clean small section and then use the other clean side to wipe next small section. Make sure you change the water in the bucket once it turns white	
7	Apply the water based stone sealer.	

INSTALLATION

8	Surfaces are ready to use after 24 hours (walking on etc), swimming pool can be filled water after 3 days	
9	If there is no plan to fill the water after 3 days, Please the surface keep wet every 2 days especially under the dry situation by spraying the clean water on the stone surface to avoid oxidation. Also do not let the stone exposed under hot sun shine, always use canvas to protect the installed stone
